Double-negative is an assured provision at supliance and remainder of-manual serviceability unto no end but added remainder to a given mutual unilaterality of ten(s) and five(s) unto two positivities of pole-placement entry waypoint in total and one-whole. Thus, the positive-negative-neutral(s) is neither a surplus mutual(s) nor mutual attritionable truth of service and debate - unto it's end, a negative-reflux of inductive limitation of a neutral(s) geometric abridged gap, - to which whence, of such in electrical complicity - the total net-waypoint of lagrangian is a physical exception.
